1. Introduction:

Project Scope:

The project is to develop a custom website where plastic products can be sold online. Administrator, in this case client will be responsible for managing the product details and the users, in this case customers from the web based backend panel. The development has to be from scratch with development of backend and front end as well as an admin website for controlling and operating the website. The development has to be scalable for an increase in the number of users.

Note:

All Images used in the document are for reference and understanding purpose only. Pattern, Layout will be enhanced and can be changed during designing stage.

2. OVERVIEW OF THE SYSTEM

Visitors/Customers:

The Individuals will be the end users of the website. They will be able to perform the following tasks:

Home Page:

This will work as the welcome screen for the Visitors/Customers. Customers can get to know about different plastic accessories and products sold from the website from this page. Customer also can explore all the main pages.

About Us:

‘About Us’ will provide information about the business like inception of the business, how the business grew, etc.

Products:

Customers can find all the products on the website and can purchase the products from the same website itself. There can be different drop down subpages or the product categories can be individual pages as well. That can be decided during design phase.

Contact Us:

A ‘contact us’ page typically contains your business contact information, address, a map and a form wherein your customers can submit queries, feedback, suggestions, comments, sales enquiry etc. These details are sent out to an email address selected by you.

Google Map on Contact Us Page:

We will integrate Google Map on your Contact us page, showing exact location of your Business on the map. This helps your target audience to locate your business or reach you easily. For us to be able to do this, your address should be traceable by Google in its map

Search Product:

Customer search for products on the website.

Search module will use “like search” module to provide product suggestion as per the terms used to search.

Customer can browse for different products on the websites on the home page as well as product page as well.

Customer now can go to specific products’ details page on the website.

When a customer click on a product they will be redirected to the products’ details page where customers can select the quantity they want to order and they add the product to the cart.

Cart and Checkout module is described in details later.

To complete the purchase customer/visitor need to register for new user and login for existing user.

Filter & Search Products:

Option to filter product in a list by a category, type, price, size, etc.

This will perform as an advance search.

Product Details

- Description
- Image
- Price
- Quantity
- Size
- Etc.

Add to Cart:

The cart module will be incremented by one when an End-User starts adding products to the cart.

On clicking cart icon, the system will redirect to the cart page with column for:

Item Description

Quantity

Price

Apply discount coupon

Add product to wish list

Sub Total

Four buttons at the bottom: Add More, Delete, Continue Shopping and Place Order.

Add More will give clients an option to increase the quantity and **Delete** will remove the product from cart.

Place Order will lead to Payment Process and **Continue Shopping** will allow users to redirected back to the products section so that they can purchase more.

Check out Module: Check out process is divided into three parts:

- Billing & Shipping
- Review & Place Order
- Payment

Billing & Shipping Information: It will have the required fields:

- ✓ First Name
- ✓ Last Name
- ✓ Email Address
- ✓ Phone
- ✓ Address
- ✓ Suburb/City
- ✓ State
- ✓ Post code

Shipping address will have the same fields.

If both the addresses are same, then on ticking the check box the shipping address fields will get automatically populated.

Option for continue checkout.

Non Registered Customers need to provide the details for first time.

After providing the details and Continue they will get registered on the website and will receive their password on their email.

For registered customers the billing and shipping address will get auto populated from their address book.

If registered customer wants the order to be delivered to a different address they need to check the box “Add a new address” and they need to provide the address.

Existing User need to login during this stage.

Review & Confirm:

This page will have Billing & Shipping information.

Order items will have following records column wise:

- ✓ Item with Product Image
- ✓ Price
- ✓ Quantity
- ✓ Total Amount
- ✓ Shipping Address and Contact information

Customer can change the quantity or remove a product from the list.

Order detail will have the following fields of price:

- ✓ Sub-total
- ✓ Discounts
- ✓ Shipping Charges if applied
- ✓ Tax
- ✓ Total
- ✓ Option/Button for place order.
- ✓ After placing the Order a confirmation email along with Tax invoice will send to the Users Email id.

Payment:

- ✓ After entering the Review and Confirm, the next phase is Payment.
- ✓ Various mode of payment are available:
- ✓ Visa/Master Card/PayPal Etc. (Client needs to provide Payment gateway API)

Sign Up: Customer can register from the home page of the website - The registration fields are as follows:

- First Name
- Last Name
- Email Address
- Mobile No
- Password

Login: Customer can login to the portal after successful registration.

Customer Dashboard

My Profile:

- Customer can view/edit their profile information from My Profile.

- Manage customer accounts.
- View customer details and previous orders.
- Add private comments to a customer.
- Delete customer accounts.
- Reset customer passwords.
- Export customers to Excel.

Reporting:

- Admin access the following reports through the Admin:
- Sales report
- Best purchased products report
- Stock report

3.GENERAL FEATURES: -

Up to 10 CMS Pages: We design, create and populate content in these standard pages for you. We will design one Home page layout and one inner page layout. We will then update contents on all the pages based on the inner page layout. You may create more inner pages yourself by using Content Management System (CMS).

Up to 5 Banners: Banner is a prominent way of displaying your gallery pictures, business values, activities and operations etc. On the main page. We design the banner by combining Royalty free images or the images provided by you and provide up to 3 iterations or changes. Back-end Manageable Banner section.

Responsive Website Design: Responsive Web Design (RWD) is a Web design approach aimed at crafting sites to provide an optimal viewing experience—easy reading and navigation with a minimum of resizing, panning, and scrolling—across a wide range of devices (from mobile phones to desktop computer monitors)

Favicon: A favicon (short for Favorite icon), also known as a shortcut icon, Web site icon, tab icon or bookmark icon, is a small image which is shown in browser Title bar or URL window when your website is loaded.

SEO Friendly URLs: SEO Friendly URLs (Clean URLs, RESTful URLs, user-friendly URLs) are purely structural URLs that do not contain a query string [e.g., action=delete&id=91] and instead contain only the path of the resource in reader friendly way, e.g. <https://www.fitser.com/services/> . This is often done for aesthetic, usability, and search engine optimization (SEO) purposes.

Displaying Social Media Links: Social media pages like Facebook would be linked to the website and will be displayed.

Support for Latest Browsers: There are multitude of Internet Browsers present in current market e.g. Google Chrome, Internet Explorer, Safari, Mozilla Firefox etc. We also have browsers for Mobile devices. We design website to support latest versions of all leading browsers. Some of the advanced functionality in website may not be supported in old technology-challenged browsers.

Post Go Live Support (1 Month): For your peace of mind, we provide free support for any bugs; minor technical issues etc. This support, however, doesn't include any enhancements or change requests.

Single Point of Contact: You would be assigned a Single Point of Contact who works as per your convenient hours.

Peace of Mind: All of our deliverables come pre-tested for the agreed scope and functionality.

Should you find any discrepancies or defects, we would be happy to correct it promptly.

Animated Header: This is a program which provides navigation capabilities for Banners. Banner design is a separate task; this functionality only helps in moving the banners in required pattern.

4.Client Deliverables:

- Logo
- Domain User ID and Password to upload files after completion of work and testing
- Payment Gateway API (Indicpay)

Time estimation:

Time taken to design and develop the website from scratch is 45 Working Days.

Approx. Cost Estimation:

Total cost for design, coding for back-end services and developing Custom E-Commerce Website: ₹ 80,000.00 INR + 18%GST.

Total cost for developing Custom Payment Gateway API: ₹ 25,000.00 INR + 18%GST.

Payment Terms:

- 1st Payment: 70% of total project cost as an advance to start the project.
- 2nd Payment: 30% of total project costs at the time of Sign off of the project.

Note:

Bank charge will be extra. We will provide support for next 1 month for any issues or bugs found. If required during the development phase if we have to purchase any plugins or api's, the charges will be extra.
